Sprint 0:

- Set up projects and Scrum board.
- Reviewed the rubric and clarified questions with instructor.
- Selected epics for vet care management, including login and user management.
- Established structure and plan for future tasks.
- Set up meeting times that align with all team members

Sprint Retro Notes:

What Went Well:

Successfully set up the projects and Scrum board.

Clearly reviewed and clarified the rubric requirements.

Defined and selected key epics for the core functionalities of vet care management system, such as login and user management early on.

Consistently attended weekly meetings at specified times

Established a structure and plan for future tasks, providing a clear direction for the next sprint.

Followed consistent structure for SRS document and User Cards

What Went Astray:

Some confusion arose around the acceptance criteria and task responsibilities, which led to delays in task completion.

Initial meetings revealed uncertainties regarding GitHub repository updates and task allocations.

A few meetings were less focused than anticipated, leading to inefficiencies.

Improvements:

Enhance clarity on acceptance criteria early in the sprint to avoid confusion.

Assign Epics/themes to each team member to avoid duplicate user stories and increase efficiency.

Ensure individual responsibilities and GitHub updates are clearly communicated and tracked.

Streamline meeting agendas to focus strictly on essential topics to improve efficiency.
